Summary

 I'm a beginner in the field of testing. Still, I understand QC processes, software life cycles, test design techniques, development methodologies, requirements, and different testing approaches. I've gained practical experience in testing web and desktop applications, as well as databases and APIs. I've also worked on creating test documentation, including bug reports, test cases, test plans, and test suites. I have strong communication and organizational skills, developed through my work in the cultural sphere, I am positive, responsible, and creative (I've filmed event announcements). I manage my time well, balancing university studies, courses, and work, and I consider myself flexible and adaptable.

Technical Skills
